

## STRETCH/TENSOR/LIFT EFFECT

Title	<b>Instrumental assessment of the immediate stretch/tensor/lift efficacy.</b>
Objective	To assess the immediate stretch/tensor/lift efficacy of a product after single application under normal conditions of use.  <i>Optional: To assess subjectively its cosmetic qualities and efficacy.</i>
Schedule	Duration of the study: 1 day. Beginning: 2 weeks upon receipt of the samples. Report: 3 weeks after the end of the study.
Methodology	Measurement of the skin extensibility (skin deformation under partial vacuum) and skin elasticity (skin ability to come back to its initial state) by means of the Cutometer®.
Procedure	<ul style="list-style-type: none"><li>• Basal cutometric measurements on 2 sites.</li><li>• Single application of the product at the investigating centre to one site.</li><li>• Immediate post application cutometric measurements on both test and control sites.</li><li>• Statistical comparison of the results obtained before and after product application and on the test and control sites.</li></ul> <i>Optional: cosmetic qualities and efficacy questionnaire</i>
